CM Process Solutions 24 pair mobile boot rack is manufactured from 304 Grade stainless steel with a glass bead blast finish. This single sided design is mounted on four swivel castors, two of which are braked. All of our boot racks are designed with hygiene in mind. Each of the boot holders have stainless-steel welded caps instead of a plastic push in bung which can be dirt traps and come loose over time. The racks are a crevice-free design ensuring a quick and easy clean down.
