

FOUR STATION SENSOR OPERATED WALL MOUNTED SINK

INDUSTRIES SERVED

CM Process Solutions stainless steel four station knee operated sinks have been designed with optimal hygiene and sanitary standards in mind. Manufactured from 304 grade stainless steel with a hygienic continuously welded design.

Each sink is supplied with four separate sensors powered from a 110V supply which when initiated activate the water flow. Additional features include a high splash back allowing for items likes soaps dispensers to be fixed.

FEATURES

OPERATIONAL DESIGN

Four stainless steel faucets are fitted on the sink splashback. Water is delivered at the correct temperature and drained centrally to the single waste pipe.

A generous trough style basin has a depth of 6 1/4 inches. Mixer valves (95 °F to 149 °F) regulate the hot and cold water to achieve a desired temperature.

The sink is wall mounted, but for additional support and stability a set of stainless steel tubular legs can be fitted to the floor. All our stainless steel sinks are delivered ready to be installed.

The four station sink can also be supplied in a knee push operated design. <u>click here for more information</u>

SANITARY DESIGN

As with all our equipment, sink stations are built using hygienic principles. Our sinks are hand free in design ensuring any potential virus and bacteria transmission is minimized.
