READY MEALS

Our range of pneumatic wash frames are designed for safe, effective 360° cleaning. The frame gives 100% access to the interior and exterior of Euro buggies, including the base and wheel arrangement. Accommodating both the 400lb and 600lb DIN 9797 Euro style buggies commonly called V mag carts or dump buggies.

OPERATIONAL DESIGN

CM Process Solutions wash frames come in two sizes, a single unit and a double unit for a higher throughput.

Both machines are pneumatically controlled by means of simple push buttons and handle both 400 lb. or 600 lb. buggys.

The buggys are simply loaded into the cradle of the machine via the positioning guides. The stainless steel pneumatic cylinder then lifts and tips to a maximum 100° angle ensuring a sanitary wash with excellent residual water drainage.

Designed to significantly reduce the risk of injury and accidents caused by the manually handling of buggys during the washing process.

The unit is mounted on heavy duty free standing frame or it can be supplied mobile with lockable castors.

OPERATIONAL SAFETY

All of our machines are designed with operator safety in mind. There are no trap or knit points when an operator can trap his or her finger.

The buggys are raised and lowered by means of a stainless steel pneumatic cylinder. The pneumatic cylinder operation has no electrics ensuring the highest levels of safety in a wet room environment.

SANITARY DESIGN

Our machines are designed with hygienic principles in mind. They are manufactured from 304 grade stainless steel and are suitable for direct contact with food products.

CUSTOMIZED SOLUTIONS

Our range of handling equipment can be completely customized to your specific individual needs. Please don't hesitate to contact us at CM Process Solutions, we are happy to discuss individual solutions with you.
